

v2 bpy-free dry-run [5k_after] — camera distance x fx x aspect x projected size (geometry only; no RGB/mask evidence)

(1) distance vs projected size (colour = fx px)

(2) distance ECDF by aspect

(3) distance ECDF by projected-size bin

(4) distance vs fx by projected-size bin

(5) distance vs fx/image_width density

(6) joint relationship summary

n accepted = 4439 (proposals = 5000)
 max distance = 9.9998 m (cap 10.0)
 distance q50 / q95 = 2.841 / 9.558 m

Pearson / Spearman (accepted set)

log d vs log ratio : -0.9365 / -0.9304
 log d vs log fx : +0.0084 / -0.0018
 log d vs log width : -0.0080 / +0.0040
 log d vs log(fx/W) : +0.0116 / +0.0043

identity residual $d - fx * 1.1 / (ratio * W)$
 max |residual| = 0.000e+00 m

distance q50 [m]	by aspect x projected-size bin				
aspect	bin0	bin1	bin2	bin3	bin4
4:3	8.92	6.14	3.14	1.95	1.27
16:9	7.68	4.03	2.00	1.30	0.93
3:2	9.33	5.56	2.88	1.77	1.14
1:1	9.27	6.86	3.71	2.18	1.48
